

ALRAHJE PAUTE

Software Engineer | Full-Stack Developer

Cotabato City, Philippines • +63 915 464 1841 • rajpaute@gmail.com
rajpaute.pages.dev • github.com/rajmahal18

SUMMARY

Full-stack systems developer and Registered Electronics Engineer building production software for government offices and small businesses. Experienced in workflow systems, document tracking platforms, finance dashboards, inventory systems, and offline-first Android POS applications using React, Next.js, TypeScript, Python, PHP, and PostgreSQL.

SKILLS

Programming: Python, PHP, Kotlin, JavaScript, TypeScript, React, Next.js, HTML, CSS, Tailwind CSS

Databases: PostgreSQL, MySQL/MariaDB, SQLite, Prisma

Mobile Development: PWA, Kotlin, Android SDK, Room Database, Bluetooth ESC/POS Printing

Tools & Deployment: Git, GitHub, REST APIs, AWS EC2, Render, Vercel

WORK EXPERIENCE

Ministry of Public Works Regional Office | Systems Developer

2025 – Present

- Designed and deployed an AWS-hosted document tracking system used by 100+ users, centralizing document records and histories so authorized staff can quickly locate, access, and monitor documents across multiple divisions.
- Developed internal automation tools for project-title parsing, BARMM acronym expansion, and the generation of 80,000+ standardized folders, significantly reducing repetitive administrative work.

Freelance Software Developer

2024 – Present

- Developed and delivered custom, client-commissioned systems, including Clinic EMR, Inventory and Sales Management, Payroll, and POS solutions tailored to each organization's operational requirements.
- Managed client projects end to end, from requirements gathering and database design to deployment, revisions, and support, improving record accessibility, reporting, and daily workflows.

EDUCATION & CERTIFICATIONS

Bachelor of Science in Electronics Engineering - Notre Dame of Marbel University 2024

Registered Electronics Engineer (REE) - Professional Regulation Commission, Philippines 2025

CS50x: Introduction to Computer Science - Harvard University (edX) 2025

PROJECTS

Office of the Chief Minister Clinic EMR and Inventory System - Next.js, TypeScript, PostgreSQL, Prisma

- Developed a centralized system for patient records, consultations, queueing, follow-ups, vaccination tracking, medicine inventory, and operational reports.
- Converted manual clinic workflows into searchable, role-based digital records to improve information access, stock monitoring, and day-to-day clinic operations.

RVerse Ecosystem - React, TypeScript, Next.js, PostgreSQL, Prisma, Kotlin, Android | Deployed on Vercel

- RVerse Inventory** - Inventory and stock monitoring system with stock movement tracking and operational reporting dashboards.
- RVerse POS** - Offline-first Android POS system with cart management, order modifiers, transaction history, and Bluetooth ESC/POS receipt printing.
- RVerse Payroll** - Attendance and payroll tracking tool for small business staff with configurable pay schedules and absence monitoring.
